D E A R [R E C R U I T E R] :

Whether it be in VS Code or in an assembly bay, I'm a builder of systems; I construct software solutions for clients, and I assemble grills, lawn furniture, and bikes for Lowe's and Walmart. As the result of prompt product replenishment and quality assurance, I increased profit for Lowe's by 3% in 2021 and by 6% in 2022.

I find [company] goal to provide tailored [data services] inspiring. Based on my three years of experience developing systems (virtual and physical), along with my training recent training in Full-Stack Development from Auburn University, and training I received at Trenholm Tech, I can assure with confidence that my expertise will expand the growth and achieve the financial goals in your institution, and here are a few of my current projects to illustrate why:

- Designing and delivering user-centric online solutions to increase client's revenue and marketing visibility using test-driven development (project samples available at www.linkedin.com/in/matthew-joki).
- Creating, maintaining, and updating personal and school projects on GitHub repository using key OOP languages and implementing version control methods (see above link to projects).
- Continuing to research and implement familiar and foreign instruction languages in order to capitalize my contribution to financial growth of clients.

Feel free to reach out at your convenience; I invite further discussion in an interview or zoom meeting regarding how the growth and long-term goals of [COMPANY NAME] will benefit from my contribution. Links to online resources are above showcasing my up-to-date collection projects. I'm honored to provide references and letters upon request, and I'm excited to hear from you.

Sincerely,

Matthew Joki

P.S. I graduated Magna cum laude at Trenholm State Technical College, and I just completed the Software Engineering bootcamp at Auburn University!
